Self Contained Breathing Apparatus

PA91 Plug SCBA Carrying System

- The PA91 Plus breathing apparatus is a streamlined, lightweight design, ideal for use when working in environments where smoke or toxic gases are present, or where there is a lack of oxygen.

Self Contained Breathing Apparatus

Airboss PSS® 500

- Designed with the comfort of the wearer in mind, the PSS® 500 is a revolutionary concept in compressed air breathing apparatus design with an entirely new air container shape and carrying system.
- By distributing air between three spherical containers, weight is concentrated directly at the hips - the body's centre of gravity.
- The PSS® 500 can be used with either a standard gauge or the DraegerMan Bodyguard® II - an innovative, fully electronic monitoring unit combining a host of monitoring and warning devices into a single instrument.
